run one more command inside it

create **exec** logs policy get

```
openshell sandbox exec
```

start one more command in the running sandbox

```
-n cyberbird
```

the sandbox to run it in

```
--no-login-shell
```

no shell start-up files run before the command

```
--no-tty
```

no terminal: plain pipes

```
-- cyberbird reactive --alert-id bc284c6b --model openai:qwen3.8-27b
```

the workload's command: the supervisor opens a relay back to the gateway, Cyberbird runs inside, and its output returns the same way

Exec did not get the image's `OPENAI_BASE_URL` and `OPENAI_API_KEY`, so the recorded run passed them with `--env`.
