read the sandbox's events

create exec **logs** policy get

```
openshell logs
```

events, not the workload's output

```
cyberbird
```

the sandbox

```
--source sandbox
```

only events from inside it: connection decisions, policy loads

```
--since 10m
```

only the last ten minutes

printed (excerpt)

```
NET:OPEN [MED] DENIED /usr/local/bin/python3.12(0) -> pypi.org:443 ...
NET:OPEN [MED] DENIED /usr/bin/curl(0) -> host.lima.internal:8080 ...
NET:OPEN [INFO] ALLOWED /usr/local/bin/python3.12(0) -> host.lima.internal:8080 ...
```

The policy admits a binary together with a destination: python3.12 may reach the model server, curl may not.
