the general case
record persisted
the gateway checks identity, workspace, names, template and policy, then stores the record as Provisioning: UUID, attachment epoch, runtime generation
gateway
Provisioning
the driver creates resources; Docker and VM may return early
supervisor hello
it connects out to the gateway: control stream, reverse relay
Ready
usable through the API
Error
the backend reports a failure
Deleting
removing the sandbox and its resources
Stopped
compute stopped; record kept
